

ANVITH BOMMA

📍 Hyderabad ✉ anvithbomma15@gmail.com ☎ +91-7075242108 🔗 [Linkedin](#) 🐙 [Github](#) 🏠 [Scaler](#)

SKILLS

- Python, Java, Javascript, HTML, CSS, React, SQL, MySQL, Git, Selenium, GitHub, Django, Flask, Pandas, Matplotlib, AWS, REST API, MongoDB, scikit-learn

EXPERIENCE

software engineer intern

1stop ai

📅 Jul 2023 - Nov 2023 📍 banglore

- Developed responsive single-page web applications using HTML, CSS, and Bootstrap with 100% mobile compatibility
- Built interactive UI components using JavaScript, improving user engagement and page interactivity
- Collaborated with development team using Git for version control, contributing to code reviews and bug fixes

PROJECTS

Sentiment Analysis on Reviews of Cosmetic Products / Python, Selenium, NLTK, VADER, Flask

- Automated web scraping system using Selenium WebDriver to collect 500+ customer reviews from Amazon, TIRA, and Smytten, handling dynamic JavaScript-rendered content and pagination.
- Applied VADER sentiment analysis from NLTK to classify reviews with 85% accuracy, calculating compound sentiment scores for positive, neutral, and negative feedback.
- Implemented data preprocessing pipeline using Pandas and NLTK including tokenization, lemmatization, stop word removal, and text normalization.
- Developed Flask web application to display comparative sentiment analysis results across platforms
- Handled data inconsistencies and debugged scraping issues in dynamic web pages

Agritek / Python, Machine Learning, Flask

- Developed crop recommendation and fertilizer prediction system using Random Forest algorithm achieving 92% prediction accuracy on test dataset.
- Built REST API using Flask to serve crop recommendations based on soil NPK values, pH levels, rainfall, and temperature parameters.
- Tested system reliability with 500+ edge cases including invalid soil parameters and boundary values, improving model reliability by 15% through iterative testing and validation.

Voice Based Gender Detection / Python, Pandas, Scikit-learn

- Built a voice-based gender classification system using machine learning techniques
- Performed feature extraction and data preprocessing using Pandas and NumPy
- Evaluated model performance and improved prediction accuracy through data analysis
- github: <https://github.com/Anvithbomma/voice-biased-gender-detection-by-using-deep-learning>

EDUCATION

BE/B.Tech/Bs

Geethanjali College of Engineering and Technology

📅 2025

Coursework: Data structures & Algorithms, Database Management Systems(DBMS), Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence, Software Engineering, Cloud Computing, Distributed Systems, Web development

ACHIEVEMENTS

- HackerRank: SQL (2024), Problem Solving (2025)
- Deloitte Data Analytics Virtual Job Simulation – Forage (2026)
- Runner-up, Intra-College Coding Challenge
